

MLP

PEAK ALERT

TOMORROW and FRIDAY between 5 and 9 p.m. WMLP anticipates a peak in demand for electricity. WMLP customers are asked to voluntarily cut back energy usage during this time. It does not mean there is a shortage of electricity. Reducing your demand during this period will help to reduce both energy costs and greenhouse gas emissions. You can **reduce electric use by turning up your AC thermostat a few degrees and turning off car chargers, dehumidifiers, pool filters, clothes dryers and any other unnecessary appliances.** By 9 p.m. the peak will pass and you can return to your normal use.

Wed July 26th

High 86° F

Expected ISO-NE Peak:

22.5 GW

Expected WMLP Peak:

< 60 MW

PEAK IS UNLIKELY

Thur July 27th

High 89 °F

Expected ISO-NE Peak:

23.4 GW

Expected WMLP Peak:

61 MW

PEAK IS LIKELY

Fri July 28th

High 89 °F

Expected ISO-NE Peak:

23.3 GW

Expected WMLP Peak:

61 MW

PEAK IS LIKELY
